

Formula-Dense Regression Sample

This fixture verifies equations, surrounding prose, equation captions, and LaTeX-oriented evidence operations.

Energy Balance

$$P^* - H^* \Delta T_{E,\max} = 0 \qquad (1)$$

Equation 1. Steady-state electrical heating balance.

$$A = 1 - T^* - R \qquad (2)$$

Equation 2. Optical absorption from transmission and reflection.

$$\text{LHCE} = H^* \Delta T_{L,\max} / (I_0 A) \qquad (3)$$

Equation 3. Light-to-heat conversion efficiency.

Discussion

The target phrase LIGHT-TO-HEAT CONVERSION EFFICIENCY should be searchable. Formula blocks must keep page and section evidence and expose copyable mathematical text.

$$\text{Attention}(Q,K,V) = \text{softmax}(QK^T / \sqrt{d_k})V \qquad (4)$$

No private paper, account, token, or production data is included.
